

AI Smart Study Planner

Problem Statement

Students often face difficulties in managing their study schedules effectively due to multiple subjects, assignments, examinations, and extracurricular activities. Poor time management can lead to stress, missed deadlines, and reduced academic performance.

The AI Smart Study Planner is designed to solve this problem by creating personalized study schedules based on the student's available time, learning goals, subject priorities, and exam dates. The system uses artificial intelligence to recommend an optimized study plan that helps students utilize their time efficiently and improve productivity.

Objectives

1. Create personalized study schedules for students.
2. Improve time management and productivity.
3. Prioritize subjects based on difficulty and upcoming exams.
4. Track study progress and performance.
5. Reduce academic stress through effective planning.

Expected Outcome

The system will generate a smart and flexible study timetable that helps students complete their learning goals on time, improve academic performance, and maintain a balanced study routine.
